Captio uses a custom URL scheme to let other applications interact with the app.

Scheme

The URL scheme is `captio://`

Actions

Two actions are available, sending notes or adding a note and let the user still edit it.

Send

URL

`captio://send`

Parameters

`note`
The text of the note.
`callback-url`
URL to open after the note has been added to the queue.
Example

To send notes from within Launch Center Pro and immediately return to Launch Center add the following URL:

```
captio://send?note=[prompt]&callback-
url=launchpro://
```

Edit

URL

```
captio://edit
```

Parameters

```
note
```
The text of the note.
Notes

If there is an unfinished note in Captio, the note text will be appended at the end of the note.

Example

Add the contents of the clipboard to a note in Captio:

```
captio://edit?note=[clipboard]
```
